Conference Agenda	9
Plenary Presentation (Day 1)	11
Platform Presentation (Day 1)	12
Plenary Presentation (Day 2)	16
Platform Presentation (Day 2)	17
Plenary Presentation Abstracts	21
Platform Presentation Abstracts	23
 WFE I Class	
WFE I-1. Sourdough Bread : Processing, Flavor and Health Benefits (<i>Victoria Kristina Ananingsih and Laksmi Hartayanie</i>)	23
WFE I-2. Utilization of <i>Stevia rebaudiana</i> and Its Health Benefits (<i>Vincent Kevin Tejo and Victoria Kristina Ananingsih</i>)	24
WFE I-3. The Potential Chito-Oligosaccharide (COS) and Rice Bran As A Source of Natural Prebiotic and the Synbiotic Effect in Functional Food (<i>Agnes Sri Harti, Anis Nurhidayati, and Desi Handayani</i>)	25
WFE I-4. Bifidobacteria As Potential Probiotic In Yogurt (<i>Laksmi Hartayanie and Victoria Kristina Ananingsih</i>)	26
WFE I-5. Initiation of Callus Cultures of Cantaloupe Melon (<i>Cucumis melo</i> L.) and Detection of Its Beta-Carotene Content (<i>Tjie Kok, Xavier Daniel, The Sandy Kristianti</i>)	27
WFE I-6. Characterization of the Polymerisation of Furfuryl Alcohol during Roasting of Coffee (<i>Yuliana Reni Swasti and Michael Murkovic</i>)	28
WFE I-7. Integrating Research in Food and Health: A Case of Promoting Health by Glucosinolates in Brassica Vegetables (<i>Probo Y. Nugrahedi, Novita Ika Putri, R.Verkerk, M.Dekker, and B. Widianarko</i>)	29
 EDS II Class	
EDS II-2. The clinic laboratory smart phone application (<i>Rosita Herawati, Suyanto EA, and Shinta Estri Wahyuningrum</i>)	30
EDS II-3. Game Development for Environmental Preservation (<i>Viena Patrisiane, Stephani Inggrit S.D, and Ridwan Sanjaya</i>)	31

EDS II-4. Design Concepts of Sustainable Coastal Tourism Development in Indonesia (<i>Gerarda Orbita Ida Cahyandari</i>)	32
EDS I-3. A conceptual framework of the Application of Game Theory on carbon tax between Annex I Country and non Annex I country by maximizing value of the ICES model (<i>Noor Syaifudin</i>)	33
EDS II-5. Relationship Between Rob and Basic Sanitation Facilities Condition in Sub District Bandarharjo and Sub-District Tanjung Mas, Semarang City (<i>Heru Nugroho, Budiyo, Sri Winarni, and Sutopo Patria Jati</i>)	34
 WFE II Class	
WFE II-1. The Quality Changes of Black Tiger Shrimp (<i>Penaeus monodon</i>) Handling in Different Food Services in Semarang (<i>Inneke Hantoro, Ita Sulistyawati, and Novia Natalie</i>)	35
WFE II-2. Green Manufacturing Implementation Base On Small and Medium Entrepreneurs' Perception (<i>Augustine Eva Maria Soekesi</i>)	36
WFE II-4. E-Health Drinking Water Refill Quality Assurance Towards The Healthy Indonesia (<i>Dewi Agustini Santoso and Dwi Eko Waluyo</i>)	37
WFE II-5. Blue ratio: Millenium Approach Over Water Efficiency Measurement (<i>King Yuwono and Y. Andry Putranto</i>)	38
WFE II-6. Handling of Heavy Metals in Liquid Waste Metal Coating Industry with Microbes (<i>Mardiyono</i>)	39
WFE II-7. Metals contamination in aquaculture ponds of Semarang - Indonesia: food safety consideration (<i>Bernadetha Soedarini</i>)	40
 ESL Class	
ESL-1. Environment and Health: The educational and multiplier aspect (<i>Aloysius Rusli</i>)	41
ESL-3. Implementation of Service Learning for Environmental Action in Civil Engineering Dept. Soegijapranata Catholic University (<i>Rudatin Ruktiningsih and Budi Santosa</i>)	42
ESL-4. Application of Organic Agriculture in the Sukun District Malang As A Strategy For Health and Environmental Education (<i>Kukuk Yudiono</i>)	43
ESL-5. Using Service-Learning in an Agricultural Area in Gintungan to Address Environmental Issues (<i>Rully Adi Nugroho and Sucahyo</i>)	44
ESL-6. Improving Learning Output of Science Education Course Through Service Learning Program In SDK Sengkan and SDK Kalasan, Yogyakarta (<i>A.Tri Priantoro and Silverio R.L. Aji Sampurno</i>)	45

ESL-7. Growing Student Sense of Caring on Community Health Problems Within Nutrition and Health Science Course (<i>Luisa Diana Handoyo</i>)	46
ESL-8. Service Learning in Smallholder Dairy Farming Area : Case Study on Sidomakmur I Farmer Group, Gedang Anak Village, East Ungaran District, Semarang Regency (<i>Lutfi Aris Sasongko and Helmy Purwanto</i>)	47
EDS I Class	
EDS I-1. Interrelationship Among Educational Attainment, Poverty Incidence, Life Expectancy and Health with Environmental Quality Index (<i>Irdam Ahmad</i>)	48
EDS I-2. Measuring the Impact of Environmental Degradation to the Indonesian Economy (<i>Dhany Setyawan</i>)	49
EDS I-4. The Concept of Green Manufacturing (<i>Rekzy Yunanto, Meiryana, and Rustina Untari</i>)	50
EDS I-5. Natural Dyes in Java Batik : Local Knowledge on Green Manufacturing (<i>Rustina Untari</i>)	51
EIJ Class	
EIJ-1. Analysis of The Lapindo Mudflow in Sidoarjo – East Java (<i>Daniel Sugama Stephanus and Taufik Chairudin</i>)	52
EIJ-2. Execution of the Mediation Agreement Out of Court on the Environmental Conflict (<i>Hassanain Haykal and Finalia</i>)	53
EIJ-3. Criminal And Administrative Law Enforcement For Business Actors As An Effort To Minimalize Environmental Pollution (<i>Hassanain Haykal and Vincent Leo Saputra</i>)	54
EIJ-4. Environment-Based Budget Policy for Sustainable Development in Indonesia (<i>Joko Tri Haryanto</i>)	55
EHE& EHP Class	
EHE-1. Myopic Models of Addictive on Cigarette in Indonesia (<i>Noor Syaifudin</i>)	56
EHE-2. Case Study: Correlation Between Climate Variability and Dengue Hemorrhagic Fever (DHF) Incidence in Semarang City During 2002-2011 (<i>Riska Khausarani Minanda, Budiyo, Sri Winarni, and Sutopo Patria Jati</i>)	57
EHP-1. Effectiveness of Mindfulness-Based Stress Reduction Therapy in High School Environment (<i>Agustina Ari Handayani</i>)	58
EHP-2. The Impact of Knowledge and Attitude Toward Green Cosmetic Purchase Decision (<i>Lina and Devinta Fulvia Alvianji</i>)	59
EHP-3. Mother's perception of the operating system, product attributes and the decision making process to buy green product (<i>Posmaria Sitohang</i>)	60

EDM Class

EDM-1. The Inevitability of Vulnerable Road Network in Urban and Regional Planning and Development (<i>FX Pranoto Dirhan Putra</i>)	61
EDM-2. Barriers to Energy Efficiency in Indonesia: A COMPARISON Across 3 Asian Countries (<i>Dhani Setyawan</i>)	62
EDM-4. The Disaster Risk Management for Women Home Based Workers (<i>Daniel Sugama Stephanus</i>)	63
EDM-5. Impact of Climate Change on Human Health (<i>Yonathan Suryo Pambudi, Angelika Jeany Nathalia, Fransiska, and Purwanti Asih Anna Levi</i>)	64

THE CLINIC LABORATORY APPLICATION FOR YOUR SMART PHONE

Rosita Herawati, Suyanto Edward Antonius, and Shinta Estri Wahyuningrum

Faculty of Computer Science, Soegijapranata Catholic University, Semarang, Indonesia
rose.rosita@gmail.com

ABSTRACT

Clinic laboratory is a laboratory which examines blood, urine, and body fluids. It can identify diseases and illnesses as the results. The lab results cannot immediately generated. It would take (quite) much time. Patient comes to the clinic laboratory and takes medical test as his doctor refers to. Usually patient have to come back again after couple hours only to take the results. Then he visits his doctor again to deciphering the lab results. It's waste time. This paper introduce the smart phone clinic laboratory application to accelerate it. Using App Inventor design tool, this application will be developed as a postman which sending a lab results to the patient. Patient does not necessary need to take the lab results in the clinic laboratory again. By using the generated code which already given at the first time patient takes the medical test, he'll just open the lab results on his smart phone using this application. And he can visit his doctor to discusses it. This application will be low cost and save times.

Keywords : *clinic laboratory, a postman medical lab results, smart phone application, App Inventor, Android application*

INTRODUCTION

Clinic laboratory is a laboratory which examines blood, urine, and body fluids. It can identify diseases and illnesses as the results. Some hospital or others health care facility have their own clinic laboratory. But others did not have it. Doctor usually only give their patient a reference letter to take a medical test at clinic laboratory. Patient will bring the reference letter to the public clinic laboratory and take the medical test. The medical lab results cannot immediately generate, usually it takes (quite) much time. So after taking the medical test, patient will leave the clinic laboratory and come back again after several hours like clinic administration suggest, just

only to take the lab results. Then patient will see his doctor to deciphering the medical lab results. For some people, this process won't be comfortable. Moreover if they are busy people which do not have a lot of time. Or for people who live far away from the clinic laboratory. This process will waste time and money.

This paper will be introduce the project of clinic laboratory application which can access using smart phone. The smart phone is chosen as the mainly tools in this project because of the increasing smart phone popularity. Many people probably rarely using computer, internet and does not have email address, but they more familiar using application on smart phone.

While the mainly objective of this project is to build the clinic laboratory application to solve the lack of time and money. It aim to provide a smart phone application which can show the report of medical lab results to the patient. So patient does not need to come back again just to take the lab results. What they just need is install and run the application, have internet connection and get the lab results. Save money and time.

CLINIC LABORATORY

A medical laboratory or clinical laboratory[1] is a laboratory where tests are done on clinical specimens in order to get information about the health of a patient as pertaining to the diagnosis, treatment, and prevention of disease. Medical laboratory technicians collect samples and perform tests to analyze body fluids, tissue, and other substances. Clinic laboratory help clinical staff such as doctors, by provides essential analytical information, that enable accurate and rapid diagnosis and treatment of patients. Depending on the kind of medical test performed, most tests are completed and reported to the patient within about 24 hours. Certain tests take several days to weeks.

APP INVENTOR

App Inventor is[2] an online Android phone application design tool. The App Inventor servers store a work and help programmer keep track of his projects. App Inventor is[3] a mobile applications design tool consisted of two major parts; Component Designer and

Block Editor. Component Designer is used to create the user interface. And the Block Editor is used to specify how the components on user interface should behave.

Instead of the traditional programming language, the App Inventor working use some pieces of block syntax. It assemble program visually. It fitting pieces together, like what component will trigger an event and the algorithm will be used to handle the event occurs. It just like a puzzle. Figure 1 show the design of Clinic Laboratory application using App Inventor's Block Editor.

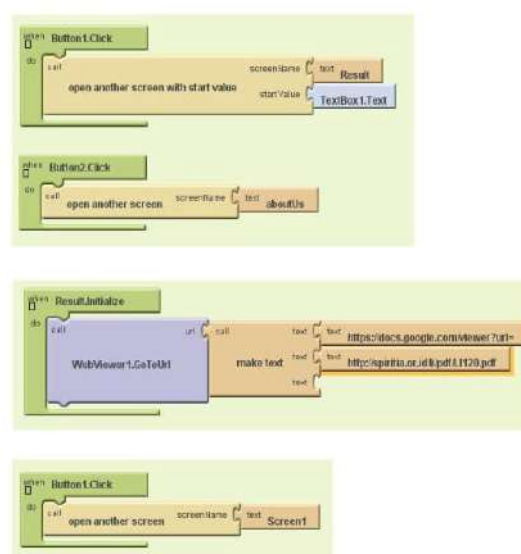

Figure 1: The design of Clinic Laboratory application

DESIGN SYSTEM

This application is reliable on the internet connection to connected between clinic laboratory and client/patient. To establish this connection, clinic laboratory can use ISP to have internet connection. While data patient

and lab results can be stored in a server by using web hosting. A web hosting is a service that allows individuals and organizations to make their website/data accessible via the internet. The web hosts are companies that provide space on a server just like data center. But the server cannot access without domain name. Usually the web host will provide a free domain name. A domain name is used as an address to access the server/website. While in client side, patient just need a smart phone with internet connection. The figure below describe the whole design system of smart phone clinic laboratory application.

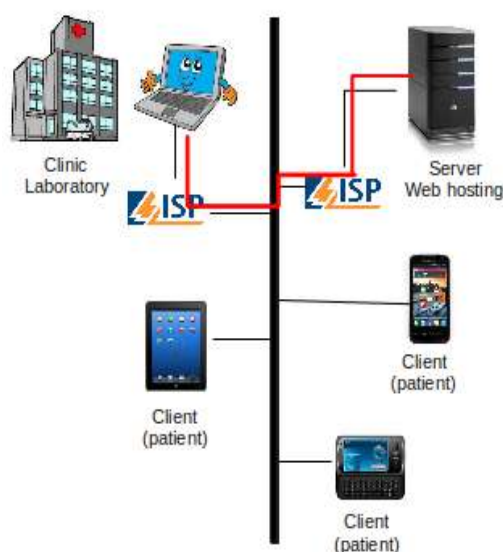

Figure 2: design system of smart phone clinic laboratory application.

RESULTS AND DISCUSSION

The smart phone clinic laboratory application is begin at the first time patient come to the clinic to take a medical test. After the register their personal information, they will get a

verification code which is generated unique and only used once. This code needs to be entered into the smart phone application. Application will send it to the server as a request to open the report of medical lab results. At the server side, the verification code will be used as a keyword to find the matching patient data and the patient's medical lab results. (Here we assume that the the lab results is ready.) If the server finds the matching data, the server will send the report of medical lab results as a PDF document. Then the application will use a Google doc viewer* to open the lab results.

There are two reasons why using PDF instead of raw text data. The first, this application design without any connection to the original system which already used in clinic laboratory. The second, to avoiding human error while (if) entering the lab results again in a new system. We assume that every clinic laboratory have their own system, and it can save or produce a report medical lab results in PDF. So this application can implement without disturbing the existing system. The clinic laboratory staff just need to gather some personal information form the patient and give the patient a generated verification code. The clinic laboratory staff still can use the existing system to input the lab results. The figure below, show how the smart phone clinic laboratory application is run.

* The google doc viewer is a viewer documents online

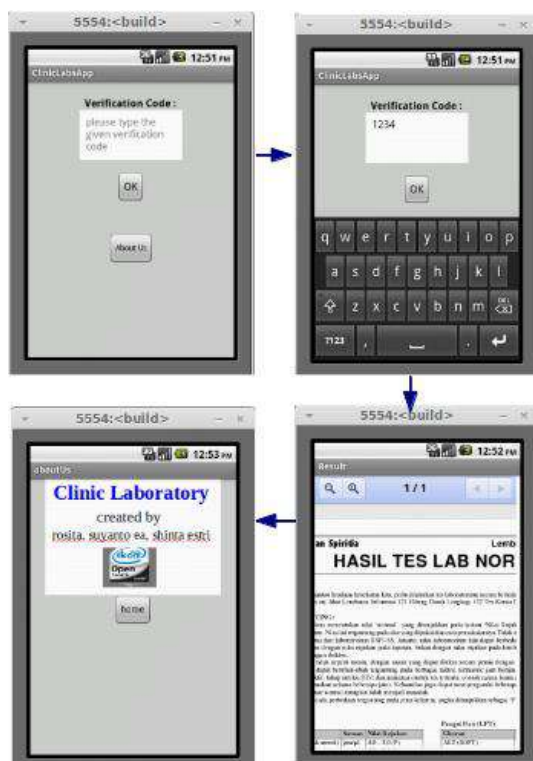

Figure 3: The smart phone clinic laboratory application

CONCLUSION

The smart phone clinic laboratory application is a postman which sending a lab results to the patient. It accelerate the process of taking a medical test at clinic laboratory. By implementing this system, the clinic laboratory will help patient save money and time. Patient can get the report of medical lab results

without need to go to the clinic again. Not only save money and time, using this smart phone clinic laboratory application will help earth by reducing the amount of carbon dioxide and reduce the traffic jam.

This paper not yet cover about security, and also yet cover the patient notification while the results is ready, which can send through sms gateway. We assume that patient will get the notification if the lab result is ready, which is probably send by the clinic laboratory staff.
